

**Grade:** 2<sup>nd</sup>

**Subject:** Math

**Expectation(s):** Can add and subtract with money (up to \$1.00)

**Materials needed:** Attached worksheet, assorted coins (optional), hundreds chart (optional)

**Teaching and learning tips/strategies:**

- Practice skip counting by 5s and 10s with your student before counting with money. This will make counting coins easier for them.
- If your student is struggling, have them practice by placing the coins on a hundreds chart. For example, in the first problem below, they'd place the quarter on the 25, the dime on the 35, and one penny each on the 36 and the 37. The last square on which they place a coin will be the answer to the problem.
- Don't forget to praise your student's efforts!

Write the value of the pictured coins.
